

secureLearn®

Reducing Recidivism by Securing Offender Internet Access

Inmates taking educational courses in prison are 43% percent less likely to be re-incarcerated. Recidivism rates in the United States currently sit at around 50%.

EDUCATE INMATES

secureLearn is a controlled Internet access platform for getting Inmates online.

Inmates are provided with access to online educational and skill building resources.

Only Internet resources sanctioned by the correction facility's staff are accessible.

REDUCE RECIDIVISM

secureLearn addresses the security concerns that have traditionally prevented corrections stakeholders from permitting prisoner Internet access within their facilities.

Inmates gain access to materials that can improve their likelihood of rehabilitation and improve reentry success.

Offender education and employment are the largest contributors to successful reentry.

The SecureLearn® Platform

SecureLearn is a fully managed, super-max, secured platform for getting offenders access to permitted on-line education, certification and transition resources. Access to resources can follow offenders through all stages of their rehabilitation process.

The Internet is an integral component to criminal justice reforms. It is an inexpensive and comprehensive resource, which if leveraged, can be used by offenders to obtain job-readiness certifications, GEDs, driver's license renewals or any other learning resource that can be used to help reduce recidivism.

Benefits

OFFENDER BENEFITS

Provides Resources to Work Towards Self-Improvement Goals in Order to:

- ❖ Obtain Employment
- ❖ Achieve Higher Educational Goals
- ❖ Achieve Vocational Goals
